Sliding Curtain

A simple product with an important function

DAN-doors' PVC strip curtains are an inexpensive and energy-saving solution that can be used in both cold and freezer rooms. They help to minimise heat and cold loss, while at the same time shielding against draughts, dust and noise. They are mainly used for openings where there is a need to keep the door open for a longer period of time, for example when filling goods in cold or freezer rooms. Sliding curtains are wall-mounted and can be produced with several different sliding functions (for example, with a larger number of sliding bars that run over each other, leaving only a few parts of the opening free).

With sliding strip blinds from DAN-doors:

- ✓ You'll minimise energy loss when loading goods
- ✓ You'll reduce the nuisance of draughts and dust
- ✓ You'll get a low-cost and maintenance-free solution
