

MH1001RC4T2

High-quality security door

This door provides you with certified burglary protection in a robust and reliable solution. It has been tested and approved as an RC4 security door in accordance with EN 1627, which means it can withstand advanced burglary attempts using heavy-duty tools over an extended period of time. This makes it a highly effective barrier against unauthorized access and organized break-in attempts.

An RC4 security door is particularly attractive for buildings where the highest security requirements apply. Examples include data centres, critical infrastructure facilities, laboratories, energy supply facilities, server rooms, high-value storage areas, or other locations where value protection and strict access control are crucial.

The door is supplied with a transom panel that can be opened when needed, providing great flexibility in terms of opening. It can of course also be delivered with different surface finishes and in any RAL colour of your choice, ensuring that it meets your requirements for both functionality and architectural design.

MH1001RC4T2	HINGED 100 MM 1-LEAF SECURITY DOOR WITH TOP PANEL – RC4
