

**3-350-****High quality profile doors for interior use.**

Our profile door system is characterised by high flexibility and many design options. You can choose between single or double doors and customise your solution with windows on all sides as needed. The profile system is made from high-quality untreated, hot-dip galvanised or stainless steel (AISI 316) and is available with or without thermal insulation. Protection against noise, gunshots or burglary is also possible, and the doors can be customised to your design with painting in all standard RAL colours, glazing bars, round windows or arch profiles.
